1139 – 8 Puzzle

An 8 Puzzle is played in a board of 3 by 3. Initially the board is scattered. Your goal is to make your board to the following board:

```
1 2 3
4 5 6
7 8 0
```

Here 0 denotes the blank. The moves are described in the following section:

```
1 2 3           1 2 3           1 2 0           1 0 2           1 6 2
4 0 6   ->      4 6 0   ->      4 6 3   ->      4 6 3   ->      4 0 3
7 8 5           7 8 5           7 8 5           7 8 5           7 8 5
Initial         right             up             left           down
```

Input

Input starts with an integer **T (≤ 1000)**, denoting the number of test cases.

Each case starts with a blank line. The next three lines will contain three integers each. You may assume that the given board is valid.

Output

For each case, print the case number and the minimum number of moves required to reach the goal state. If it's impossible, then print **'impossible'**.

Sample Input	Output for Sample Input
3 1 2 3 4 5 6 8 7 0 1 2 3 4 5 6 7 0 8 1 3 2 4 6 5 7 8 0	Case 1: impossible Case 2: 1 Case 3: 18
